

They are part of our team !

Antoine Van Malleghem
IT Consultant

After graduating as a civil engineer in computer science and obtaining an additional master's degree in management science, I joined Hermès in 2017 in the young talents' team.

Passionate about Data Science and more precisely Machine Learning, I am part of the Data Science division's team within Hermès.

At my clients, I took on the role of .NET developer analyst for a few years. This position gave me the opportunity to evolve quickly and gradually towards a role as an architect.

Hermès encourages the personal development of its employees thanks to its training system, certifications, and internal projects.

Alexandre Malingreau
BI Consultant

Graduated as a civil engineer in computer science, I started my career at Hermès as a young talent. Curious by nature, I have always been attracted by new technologies. IT is evolving so much that you never get bored!

I also had the opportunity to quickly evolve within Hermès and at my clients. I am now a Business Intelligence consultant and the manager of the young talents' team. A role that is close to my heart.

At Hermès, we have the opportunity to specialize in technologies that interest us through trainings and certifications. Besides that, the human approach that we find in our consulting company is really important. You feel supported as soon as you start. We also organize numerous team events in order to strengthen the links between consultants.

We look forward to welcoming you to our team!
